

What is a two-stage grid-connected inverter for photovoltaic (PV) systems?

In this study, a two-stage grid-connected inverter is proposed for photovoltaic (PV) systems. The proposed system consists of a single-ended primary-inductor converter (SEPIC) converter which tracks the maximum power point of the PV system and a three-phase voltage source inverter (VSI) with LCL filter to export the PV supplied energy to the grid.

Does Aishwei/Solplanet have a global solar PV inverter market share?

September 19, Shanghai, China - AISWEI/Solplanet has achieved a significant milestone by securing 9th position in global solar photovoltaic (PV) inverter shipments in 2022, as reported in the Global Solar PV Inverter and MLPE Market Share 2023 report by Wood Mackenzie, a renowned global insight business for renewables, energy and natural resources.

How do two stage inverters work?

In two stage inverters, a DC/DC converter connects the PV panel and the DC/AC inverter. The PV panel converts sunlight to DC electricity (for a PV panel with low output voltage, a DC/DC boost converter is used); DC voltage can then be converted to AC voltage with a power electronics system (inverter).

What types of inverters are used in photovoltaic applications?

This article introduces the architecture and types of inverters used in photovoltaic applications. Inverters used in photovoltaic applications are historically divided into two main categories: Standalone inverters are for the applications where the PV plant is not connected to the main energy distribution network.

How to pair a solar inverter with a PV plant?

In order to couple a solar inverter with a PV plant, it's important to check that a few parameters match among them. Once the photovoltaic string is designed, it's possible to calculate the maximum open-circuit voltage ($V_{oc,MAX}$) on the DC side (according to the IEC standard).

What is a single-phase VSI?

Inverters are classified into two types: a voltage source inverter (VSI) is an inverter which is fed with constant voltage, while a current source inverter (CSI) is fed with constant current. Generally, CSIs are used for applications that need very high power AC motor drives. According to the aims, a single-phase VSI was used in this study.
