

How can Albania improve energy security & climate resilience?

sun and wind resources, which are currently almost entirely untapped. In order to improve energy security and climate resilience and to meet growing energy demand, it is imperative that Albania accelerates the transit to those abundant, available and local, renewable energy sources. Figure

Is biomass a source of energy in Albania?

(Article 22(1) g) of Directive 2009/28/EC). Biomass is one of the most used sources of energy in Albania - mainly in the form of firewood, combined in some cases with shrubs and waste of the plants from the agricultural sector. Albania current use of woody biomass exceeds annual forest growth increment by 46%.

Is electricity renewable in Albania?

Although the electricity sector is almost completely renewable in Albania, additional efforts are needed, in heating and cooling as well as in the transport sector, to reach the overall renewables target.

Can Albania Go Green?

"We've made real progress with a strategy that includes solar and wind energy alongside our hydroelectric power." Kumburo also said that Albania now generates 100% of its electricity from renewable sources, showing that it's possible to go fully green. "We don't pollute. Albania uses only renewable energy," Kumburo added.

Why is Albania so reliant on hydropower?

Hydropower, with the remaining divided between solar (1%) and crude oil (4%). The remaining share of supply comes from imports making Albania a net energy importer and thus heavily reliant on imports. Being also heavily reliant on hydropower also means that renewable generation is sensitive to rainfall, of which has seen

Will Albania move from hydroelectric power to solar?

In a video message, the ministers talked about Albania's move from hydroelectric power to a mix of solar and wind energy. Balluku explained that this shift is part of Albania's long-term plan for a sustainable future.
