

Today, we share the information about the BESS lab in Agricultural and Biological Engineering at U of I. A unique laboratory, BESS conducts ventilation fan performance testing for companies, and posts results in an online database that anyone can access and use to select fans. BESS Lab website is here: bess.illinois

To give a sense of the variability of fan performance, Table 1 below was created from the Bess lab data to demonstrate the average and range of performance based on the overall design of the fan. ... Table 1. Fan Performance Data Modified from Bess Labs Testing . Fan Size: Airflow (cfm) 0.05" SP: VER (cfm/W) 0.05" SP: Airflow (cfm) 0.10" SP ...

The test confirmed the expected efficiency and precise speed regulation, along with considerable improvements in motor protection. The couple of days spent at BESS Labs proved to be an insightful experience in the fan ...

The "BESS Lab" at the University conducts fan performance testing on most all agricultural ventilation fans available on the market. Their program is regarded as the industry standard for fan performance testing. ... you can now compare your fans' current RPMs with the as-new BESS lab RPM at a similar static pressure. One thing to note ...

Education: BS, Materials Engineering, 1979, University of Lima; San Jose University Business School, 1984; San Jose State University Material Science, 1992; Ground Penetrating Radar, Utility Locating and Survey GSSI Institute, 1999; Certified Utility Locator Staking University, 2004; General Engineering Contractor - A Licensure

BESS Lab, short for "Bioenvironmental and Structural Systems Laboratory," is a globally recognized research lab at the University of Illinois (USA) that specializes in testing the performance, and energy efficiency of ventilation fans ranging in ...

We are very proud that also BessLab confirms Fancom fans are one of the best performing and sustainable fans available in the market. Last month BessLab published the results of the tests of the I-Fan 145 and the Fan ...

The testing done by BESS Labs provides foreign manufacturers with confirmed data accepted throughout the world. So, what is a wind tunnel? (Image of wind tunnel.) The BESS Lab unit is a 9' x 9' x 26' long wooden chamber. To begin the test, the team fastened the test fan at one end of the chamber and warmed up the motor for 15 minutes.

Each test included here is for a "fully dressed" fan with shutters and screens attached and mounted

as normally installed. Fan Selection Criteria ... A flat performance curve, or an "Airflow Ratio" approaching one, is desirable for cold weather fans in livestock buildings. The "Airflow Ratio" is the ratio of a fan's airflow at 0.2" S.P. divided ...

The Bioenvironmental and Structural System (BESS) Laboratory is a research, product-testing and educational laboratory. The lab provides unbiased engineering data to aid in the selection and design of agricultural buildings and assists equipment manufacturers in developing better products. ... Included on this site are performance test results ...

University of Illinois BESS Laboratory "Agricultural Ventilation Fans Performance and Efficiencies" test booklet is the leading source for agricultural fan performance data (an electronic version of the test booklet can be found at) Along with a fan's air moving capacity at various static pressures BESS Laboratory provides

MagFan was tested at Bess Lab in January 2019. Compared to all other fans tested at Bess Lab, MagFan is quite simply in a league of its own in terms of not just efficiency but also total airflow. No other fan comes anywhere near the performance and efficiency of MagFan.

Ford is manager of the Bioenvironmental and Structural Systems (BESS) Laboratory. The BESS lab assists equipment manufacturers in developing better products and provides unbiased engineering data to aid producers in selecting agricultural ventilation fans. Ford estimates that the lab has done more than 2,500 tests over the last 13 years.

We are very proud that also BessLab confirms Fancom fans are one of the best performing and sustainable fans available in the market. Last month BessLab published the results of the tests of the I-Fan 145 and the Fan-145 on/off, which showed that the large Fancom 57" fan can compete with the best fans in the market in terms of capacity and energy efficiency.

The testing done by BESS Labs provides foreign manufacturers with confirmed data accepted throughout the world. So, what is a wind tunnel? Wind Tunnel at BESS Labs. The BESS Lab unit is a 9" x 9" x 26" long wooden chamber. To begin the test, the team fastened the test fan at one end of the chamber and warmed up the motor for 15 minutes.

Bess labs at the University of Illinois performs fan performance tests that can be found online. Evaluating Fan Performance. To give a sense of the variability of fan performance, Table 1 below was created from the Bess lab data to demonstrate the average and range of performance based on the overall design of the fan.
