In general, Lithium ion batteries (Li-ion) should not be stored for longer periods of time, either uncharged or fully charged. The best storage method, as determined by extensive experimentation, is to store them at a low temperature, not below 0°C, at 40% to 50% capacity. Storage at 5°C to 10°C is optimal.

I've had a particularly good battery the last 14 years. The difference comes down to owner management and internal battery construction. Repeatedly discharging a battery too far, or leaving it fully discharged for a long time, will shorten its lifespan considerably. Another factor that impacts lifespan has to do with the way the battery is made.

For long term storage leave the Tesla vehicle plugged in and set the battery maximum charging level to between 50% and 60%. For short term storage of up to several weeks you could leave the Tesla Model Y unplugged, with battery state of charge at 70% or 80%. Turn off Sentry Mode and Smart Summon (a FSD feature).
