

What type of electricity is used in Brunei?

Brunei's electricity sector is dominated by Natural Gas as the primary source of generation, with diesel being used to power the electric system in the Temburong district. Solar PV contributed less than 1% of the total share of generation in 2019

Can Brunei be a solar power hub?

Brunei has floating solar potential of ~2.3 GW which presents an opportunity both for use in the electricity grid as well as for green hydrogen production. Adding 500MW of this potential to the grid would lead to an increase in Solar PV penetration to 30%.

How much solar power does Brunei have?

They are designed with large rotor blades and higher hub heights (>100m) to capture a larger amount of energy at the same rated power. Brunei's current installed Solar capacity is 4.63MW, with 60MW additional planned by 2024 and a target to reach 300MW by 2035.

Can floating solar power Brunei?

Besides reducing emissions from the electricity sector which is largely Natural Gas-based and contributes to most of Brunei's total emissions, use of floating solar to power the grid would also free up Natural Gas for exports, unlocking much more value than using the gas to produce subsidized electricity.

Is distributed solar a viable alternative to public transport in Brunei?

Net Zero emissions targeted by 2050. Share of privately owned cars in Brunei's 92% transportation ecosystem with very limited uptake of public transport. Given land constraints in Brunei, distributed solar could be an effective way to increase the country's Solar PV capacity.

Will Brunei have a solar grid in 2035?

Using projected Oil Production, demand for H₂ in Oil Refining is estimated at ~0.03 Mtpa in 2035. By 2035, Brunei could have ~30% of solar PV penetration in the grid. Hence, effective planning of the grid would be necessary to ensure that the energy system is resilient and flexible enough to avoid high curtailment and stability issues.
