

What is Stora Enso?

At Stora Enso, we believe that everything that is made from fossil-based materials today can be made from a tree tomorrow. As another proof of this, we produce bio-based carbon called Lignode™; by Stora Enso, used for sustainable electrification. Our aim is to meet the demands of the global battery market by developing renewable alternatives.

What is Stora Enso doing with lignin?

Stora Enso's pilot facility for producing bio-based carbon materials from lignin started operations in summer of 2021, following a EUR 10 million investment announced in 2019. The pilot plant for bio-based carbon materials is located at Stora Enso's Sunila production site in Finland, where lignin has been industrially produced since 2015.

What is lignode™; by Stora Enso?

Lignode™; by Stora Enso is a hard carbon made from lignin - an existing by-product in the production of pulp. Stora Enso's aim is to develop the most sustainable anode material in the world - made from lignin. We are excited to be a part of the journey as a partner in the Polestar 0 project - aiming for a truly climate-neutral car by 2030.

How many employees does Stora Enso have?

Stora Enso has approximately 20,000 employees and our sales in 2023 were EUR 9.4 billion. Stora Enso shares are listed on Nasdaq Helsinki Oy (STEAV, STERV) and Nasdaq Stockholm AB (STE A, STE R). In addition, the shares are traded in the USA as ADRs and Ordinary Shares (SEOAY, SEOFF, SEOJF).

Stora Enso and Altris Collaborate to Develop World's Most Sustainable Battery. June 6, 2024 - Stora Enso has partnered with Altris, a Swedish developer of sodium-ion batteries. The two companies aim to further advance the development and commercialization of a sustainable battery value chain in Europe. Together, the two companies will drive the ...

Here is how hard carbon can improve battery performance and lower the CO2 footprint in battery production at the same time. Read about Lignode™; by Stora Enso. ... It is extracted as a by-product of cellulose fiber production - a bio-based and scalable production currently from Stora Enso's Sunila Mill in Kotka, Finland. This means that new ...

10.3.2. Tier 2 Countries. At the date this Chapter is last updated, the EU, US, UK, and/or UN have adopted significantly more extensive sanctions against individuals, companies, industrial sectors and/or products in relation to the following Tier 2 Countries. The list of Tier 2 Countries will change from time to time so make sure you have access to the latest list, always available online.

We want to make it as easy as possible for you to build with wood. The Stora Enso Building Solutions partner network brings together deep product knowledge, understanding of local markets and expertise in wood construction. Connect ...

A significant part of this is acquiring battery materials to power clean vehicles. One of these essential materials is graphite, used for the negative end of a lithium-ion battery known as the anode. ... Lignode™; by Stora Enso - a European alternative for graphite. However, there are good news ahead. In the future, car batteries can be from ...

Lignin, a natural polymer that accounts for up to 30% of a tree's composition, contains carbon and is abundantly available. Stora Enso has developed Lignode at its pilot plant in Kotka, Finland. This development showcases the potential for using bio-based materials in battery production.

Pulp and lignin production at Stora Enso's Sunila Mill was discontinued in 2023. Since then, Stora Enso's priority for Sunila has been to find an owner that can bring new, profitable business operations and jobs to the site that has a well-working infrastructure and favorable location.

Companies worldwide are working on a sustainable power storage solution using renewable biowaste called lignin to make wood batteries. One of the largest private forest owners in the world, Stora Enso, recently built a production facility worth EUR10 million to create bio-based carbon by turning trees into batteries. Producing these wood batteries is possible by ...

At Stora Enso, we believe that everything that is made from fossil-based materials today can be made from a tree tomorrow. As another proof of this, we produce bio-based carbon called Lignode™; by Stora Enso, used for sustainable electrification. Our aim is to meet the demands of the global battery market by developing renewable alternatives.

About Stora Enso. Part of the global bioeconomy, Stora Enso is a leading provider of renewable products in packaging, biomaterials, wooden construction and paper, and one of the largest private forest owners in the ...

A significant part of this is acquiring battery materials to power clean vehicles. One of these essential materials is graphite, used for the negative end of a lithium-ion battery known as the anode. ... Lignode™; by Stora Enso - ...

Stora Enso will remain a tenant at Sunila, ensuring the continued operation of its Lignode battery material pilot plant. "We are excited to have AALTO Development as the new owner for Sunila," said Tuomas Hallenberg, Stora Enso's Finland Country Manager and Executive Vice President of Forest Division.

STORA ENSO OYJ INVESTOR NEWS RELEASE 22 July 2022 at 08:29 EEST. ... Both companies bring key components, competence, and expertise to the battery partnership. Stora Enso will provide its lignin-based anode material Lignode, originating from sustainably managed forests, while Northvolt will drive cell design,

production process development and ...

STORA ENSO OYJ NYHETER F&#214;R INVESTERARE 2021-07-21 kl. 8.30 EEST. Kontakt International S&#246;k Om Stora Enso ... Stora Enso Lignode battery. Vi &#228;r The renewable materials company. Vi &#228;r den ledande leverant&#246;ren av f&#246;rnybara produkter inom f&#246;rpackningar, biomaterial och tr&#228;konstruktion, och en av de st&#246;rsta privata skogs&#228;garna i v&#228;rlden. ...

One of the largest private forest owners in the world, Stora Enso, recently built a production facility worth EUR10 million to create bio-based carbon by turning trees into batteries. Producing these wood batteries is ...

Although Stora Enso digital tools and building solution planning confirmed it was possible, how exactly a project of this scale would be completed within sixty weeks was yet to be seen. The job required delivering around eight x 50m&#179; loads of precision-packed wood materials from Stora Enso mills every week for one year and two months.
