Can solar panels heat a home?

Solar panels can heat a home in various ways. Here are their pros, their cons, and which methods are best for you. A heat pump and solar panels could reduce your heating bills by 80%. This ingenious machine draws warmth from the air, ground, or water and uses it to supply hot water to your home's radiators, showers, and taps.

How do solar panels work?

When sunlight hits layers of silicon inside solar cells, an electric charge builds up, creating a flow of electricity. Solar panels are mainly located on the roofs of homes and buildings and can generate electricity and heat water free of charge. In the Northern Hemisphere (including Scotland) solar panels work best when they face south.

Can solar panels generate electricity?

Yes, it can - solar power only requires some level of daylight in order to harness the sun's energy. That said, the rate at which solar panels generate electricity does vary depending on the amount of direct sunlight and the quality, size, number and location of panels in use.
