

Will solar panels generate enough electricity year-round?

Whether they'll generate enough electricity for your home year-round will depend on: if your solar panel system works in a power cut. It may be more realistic to think about whether you can be self-sufficient for the brighter parts of the year, and then top up your energy use from the grid at other times.

Are solar panels the future of electricity?

Panels now occupy an area around half that of Wales, and this year they will provide the world with about 6% of its electricity--which is almost three times as much electrical energy as America consumed back in 1954. Yet this historic growth is only the second-most-remarkable thing about the rise of solar power.

Do solar panels generate electricity?

That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use. Even in winter, solar panel technology is still effective; at one point in February 2022, solar was providing more than 20% of the UK's electricity.¹

What happens if your solar energy system doesn't supply enough electricity?

This means that if your solar energy system doesn't supply enough electricity, the grid will supply the rest. Myth #2: Solar panels aren't efficient enough.

Is solar power over?

The most remarkable is that it is nowhere near over. Read more in our series on solar energy: To call solar power's rise exponential is not hyperbole, but a statement of fact. Installed solar capacity doubles roughly every three years, and so grows ten-fold each decade. Such sustained growth is seldom seen in anything that matters.

Does solar work if it's raining?

Here are some common myths and misconceptions: Myth #1: Solar only works when the sun is shining. I still need power when it's raining. Actually, solar technology can be leveraged in virtually any condition, including rainy and snowy days, because some sunlight still reaches the earth.

With bright sunny days and lots of midsummer daylight hours, solar panel owners can be smug in the knowledge they're using completely renewable power when the sun is shining. But how does their electricity ...
