

@capacitor/storage. The Storage API provides a simple key/value persistent store for lightweight data. Mobile OSs may periodically clear data set in window.localStorage, so this API should be used instead. This API will fall back to using localStorage when running as a Progressive Web App.. This plugin will use UserDefaults on iOS and SharedPreferences on Android.

For most capacitors, the shelf life is significantly determined by storage conditions. Electrical characteristics of stored capacitors change mainly depending on storage conditions, especially temperature and humidity. For some capacitors such as aluminum electrolytic capacitors, storage temperature determines the rate of chemical reactions.

Since Capacitor apps run primarily in a web view or browser, Web APIs for storage are available to Capacitor developers. However, there are some major caveats to keep in mind with these APIs. Local Storage can be used for small amounts of temporary data, such as a user id, but must be considered transient, meaning your app needs to expect that ...

This plugin for Capacitor 6+ provides secure key/value storage on iOS and Android. It was originally designed to be a companion to @aparajita/capacitor-biometric-auth in order to securely store login credentials, but can be used to store any JSON data types.

Dielectric absorption, also referred to as "soakage", refers to energy storage within a capacitor's dielectric that is absorbed and released on a longer time scale than would be predicted by the device's nominal capacitance and ESR. In the lumped-element model, it can be represented as a series connection of a resistor and capacitor (or ...
