

What is the energy condenser added by Projecte?

This page is about the Energy Condenser added by ProjectE. For other uses, see Energy Condenser. The Energy Condenser is a machine added by ProjectE, based off the Energy Condenser added by Equivalent Exchange 2. The Energy Condenser performs three functions.

How do energy condensers work?

The energy condensers turn items into other items, set the target item in the top right slot and pump items in to convert them into the target item. Project EX has something for that, but it might be a bit overkill. Heyo, I have been looking around and trying to pull EMC from my system into a condenser, without going through a new EMC generator.

What is the energy condenser?

Community content is available under CC BY-NC-SA unless otherwise noted. This page is about the Energy Condenser added by ProjectE. For other uses, see Energy Condenser. The Energy Condenser is a machine added by ProjectE, based off the Energy Condenser added by Equivalent Exchange 2.

Can I use energy condensers to convert items into other items?

You don't really. The energy condensers turn items into other items, set the target item in the top right slot and pump items in to convert them into the target item. Project EX has something for that, but it might be a bit overkill.

What's the difference between a condenser and an EMC link?

It is replaced by the EMC link which is your direct line you are looking for, but if you aren't there yet EMC or Tech-wise, the condenser is the main early emc generator, requiring manual intervention now and again. When you say system, are you referring to the EMC tablet, a refined storage system, or your ender-io pipe network from the mob farm?

I am just using advanced wooden transport pipes... another question here suggested using redpower pneumatic tubes, or switching to regular wooden transport pipes. a filter and tubes will give you the same functionality as wooden transport pipes. i've also seen people suggest you pull from the front of the condenser, and place in the top.

ProjectE Energy Condenser integer overflow? I dropped a stack of octuple compressed cobblestone into an Energy Condenser MK2 while creating Avaritia's singularities, and it promptly broke. I was thinking it would just consume them one at a time every time it needed more energy to create the blocks of iron, but I think it just decided to eat ...

The best in projectE alone is just collectors with relays around an energy condenser with many watch of

flowing time around. If you also have Project EX stuff is different as you can import ...

The Energy Condenser duplicates items with EMC values using other items with EMC values. The top-left slot is where the item to be duplicated is placed. Then, any item put in its other 91 Inventory slots will be converted into the target item, should there be enough EMC. Condensers can also use EMC created from adjacent Antimatter Relays and Energy Collectors. If there are ...

I have fixed it by restarting EMC with the command /projecte reloadEMC, and making sure to left click to put the item in. (left click does not work)

Power flowers generate emc from effectively nothing. The item you're condensing EMC into is entirely up to you. Diamond blocks, emerald blocks and stuff like that are just convenient because they're really dense in terms of EMC, so you don't have to move as many items from the condenser to the table.

tried reloading emc but still no spamming worked. The subreddit for all things related to Modded Minecraft for Minecraft Java Edition --- This subreddit was originally created for discussion around the FTB launcher and its modpacks but has since grown to encompass all aspects of modding the Java edition of Minecraft.

Place stack of Charcoals into the slots on the left, Energy Collector will pick one move to the bottom slot and when there will enough EMC in the internal buffer will transform it into Redstone moving it back to the left area. Energy Collector can also send the collected EMC into Antimatter Relay or Energy Condenser.

The optimal design depends on exactly how much EMC you have available for building the structure, but usually the best configurations just involve making two diamond-shaped checkerboards that are offset by a block (so each relay has 5 collectors and each collector apart from the ones on the edges is helping 5 relays, so the middle of the structure is about as good ...

Tickets that do not conform to this template will be closed without comment Exact ProjectE version (do not say "latest", "latest on Curse", or similar): ProjectE-1.19.2-PE1.0.0B Exact Forge version...

project e energy condenser problem I'm having problems with the condenser set up. I have it all set up right (checked with a video and have use project e before) but it still doesn't seem to produce any item. really just wonder if this is some thing that the modpack does to help level the game out or what?

You can get an energy condenser and repair talisman before the chaos dragon and stuff like the transmutation

table is gated behind chaos shards from the chaos dragon, meaning you only those things when you're almost done with the pack and just want to do a few remaining quests here and there. ... I think ProjectE is inherently flawed as a ...
