All basic solar water heating systems are made up of a solar collector, a tank, and a circulation system. Solar Water Heaters use a collector, usually placed on your roof, to gather thermal energy from the sun. A heat transfer fluid is passed through the collector and heated as it moves along the copper tubes inside it.

A complete solar system is an all-in-one solution for generating and storing solar energy.. It typically includes:
Solar Panels: Capture sunlight and convert it into electricity. Inverter: Converts the electricity from the panels into a form your appliances can use. Solar Battery: Stores energy for use at night or during blackouts. Mounting Structure: Holds the panels securely in place.

The implementation of solar energy systems is gaining traction, particularly with packages like the 3kVA Complete Solar System offered by Sona Solar Zimbabwe. We will explore the specifications, benefits, and applications of the 3kVA solar system, highlighting how it can meet the energy needs of households and businesses across the country.
