

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

How does a solar panel installation work?

The installers start by setting up mounts, ensuring that the solar panel remains securely fastened to the roof and protects it from potential damage in bad weather. This is done by lifting some roof tiles in order to fix anchor points to the rafters. To these roof anchor points are attached the solar panel mounting system.

What are the different types of solar panel wiring?

Learning the basics of solar panel wiring is one of the most important tools in your repertoire of skills for safety and practical reasons, after all, residential PV installations feature voltages of up to 600V. There are three wiring types for PV modules: series, parallel, and series-parallel.

Do I need an electrician to install solar panels?

Note: If you are not familiar with electrical wiring procedures, seek the help of a solar panel professional or electrician. However, there is a lot you can do yourself to install solar panels and a solar array so that you would need the electrician only for the wiring parts of the project.

How do you install PV panels on a house?

The most common method of installing domestic PV panels is mounting them to your rafters. This is done with custom hooks, aluminium mounting frames and specialist clamps. When a property is over one storey high, scaffolding is essential to gain roof access as the engineers need access to work on the roof.

Do solar panels need to be wired before installation?

Without fastening them at first, the installers will place the solar panels onto the mounting system. Once the correct angle is achieved, the panels are fastened with bolts. Your solar panel will most likely be pre-wired before installation, meaning that the wiring process can be skipped.
