

Fengjun 5 generator indicator light flashes

What does a flashing light mean on a generator?

The flashing light should encourage the owner to service the generator. Because the meaning behind the three flashes will vary depending on the model, you should check the controller. Modern generators have diagnostic tools that use codes to reveal the fault that has caused the generator to malfunction.

What does a blinking green light mean on a generator?

But a blinking green light signals the generator has detected an issue and entered diagnostic mode. Common issues include low oil pressure, high temperatures, overcranking the starter, and controller communication failures. By counting the blinking pattern, you can reference the fault code and begin troubleshooting.

Why is the status indicator light on my home standby generator not working?

If the side status indicator light on your home standby generator is malfunctioning or not working, it could signal a simple issue with the connection or potentially a more significant problem with the light or wiring harness itself. This article provides some basic troubleshooting checks to address issues with the status indicator light.

What does a yellow LED on a Generac generator mean?

According to Generac, a yellow LED on one of their units acts as a reminder. It encourages the owner to service the generator. Sometimes, the generator expects you to inspect the battery. On other occasions, you have to change the oil and filter. However, the unit will continue to run. You can clear the light by pressing 'Enter' on the controller.

Why is my Generac generator blinking red?

Faulty spark plugs can also trigger a blinking red light on your Generac generator. The spark plug is a small yet essential component that ignites the fuel-air mixture in the generator's combustion chamber. A worn-out or damaged spark plug may not ignite the mixture effectively, disrupting the generator's operation and triggering the warning light.

How do I know if my generator is working correctly?

After checking and securing the connection, test the generator to see if the side indicator light functions correctly. Press the OFF button on the control panel. If the red LED lights up, it is working correctly. Next place the control panel in the AUTO position. If the green LED lights up, it is working correctly.
