

How to deal with convex surfaces on photovoltaic panels

Can convex structures be integrated with photovoltaic modules?

Conclusions Convex structures are used in buildings and may be integrated with photovoltaic modules. Convex surfaces are self-shading the area of which must be considered in the calculation of the direct beam incident radiation. The direct beam incident solar radiation on a convex surface is non-uniform.

Can a Photovoltaic concentrator flex over curved 3D surfaces?

The use of photovoltaic devices for energy harvesting in real-world applications requires that they are conformable to non-flat surfaces. Here, a micro-scale concentrator module shows 15.4% outdoor conversion efficiency and can stretch over curved 3D surfaces.

Can photovoltaic arrays be designed on curved surfaces?

Design optimization of photovoltaic arrays on curved surfaces. 2018, Design, Automation & Testing in Europe Conference & Exhibition (DATE), DOI: 10.23919/DATE.2018.8342107. Hayter, S., Torcellini, P., Deru, M., 2002. Photovoltaics for buildings: new applications and lessons learned, NREL/CP-550-32158.

Can stretchable photovoltaics be applied to 3D curved surfaces?

Development of stretchable photovoltaics are crucial to achieve rapid growth of the future photovoltaic market. However, owing to their rigidity, existing thin-film solar cells based predominantly on silicon, compound semiconductors, and perovskites are difficult to apply to 3D curved surfaces, which are potential real-world candidates.

Why is a photovoltaic module suitable for 3D curved surfaces?

Thus, this module design enables high areal coverage on 3D curved surfaces, while generating a higher electricity yield in a limited installation area. The use of photovoltaic devices for energy harvesting in real-world applications requires that they are conformable to non-flat surfaces.

What is a convex surface?

Convex structures are used in buildings and may be integrated with photovoltaic modules. Convex surfaces are self-shading the area of which must be considered in the calculation of the direct beam incident radiation. The direct beam incident solar radiation on a convex surface is non-uniform.
