

Should I use precast concrete ballast blocks for my solar panel project?

Choosing to use our precast concrete ballast blocks for your solar panel project can provide you with added flexibility. Ballast blocks can be used on flat commercial-style roofs, where it is not possible to penetrate the roof surface, and are simpler to install than penetrating systems.

How do I install a solar photovoltaic system?

The most efficient way to install a solar photovoltaic system is by using a Heliomotion. Simply because a Heliomotion has innovative sun-tracking technology that enables solar panels to track the sun throughout the day and year. The possibilities for mounting solar are endless.

Are concrete ballasts good for solar panels?

With damaged concrete ballasts, your solar arrays risk further issues, so it's crucial to use concrete rated for your local environmental conditions. While concrete ballasts are ideal for flat or low-sloped roofs, they are also an effective solution for ground-mounted systems.

Can you make a whole roof out of solar panels?

It is possible to create a whole roof out of solar panels using an in-roof system. Making the whole roof out of solar panels can be a fantastic option as installing solar panels is an asset to the home because of the savings in electricity and feed-in tariff payments. Why not consider making it your total roof covering?

Can you build a solar array with concrete?

While it is true that you can purchase rectangular-shaped concrete blocks at your local home improvement store, concrete manufacturing companies create specially designed concrete ballast for solar arrays. For instance, communities near Annapolis, Maryland, wanted to build a solar array on top of a landfill site.

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.
