

How to use the portable energy storage battery box

Can you use a battery to store electricity?

You can use a battery to store electricity you import from the grid at cheaper times of the day, with a smart time of use tariff. This can reduce your reliance on more expensive electricity during peak periods, with some tariffs even letting you sell energy during those periods.

How can a home storage battery help you save money?

Alternatively, you could install a home storage battery. These store your electricity to use later, making your energy system more independent from the National Grid. Usually battery storage is used alongside solar panels, but it can also be used with an energy tariff that offers cheaper electricity at off-peak times.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.

What is solar battery storage & how does it work?

Together with solar panels, solar battery storage allows you to store and use more of the renewable energy they generate, reducing your electricity bills and carbon footprint. So what is it and how does it work? On average, solar batteries cost around £4,500 and typically last 10 to 15 years.

Does battery storage work with a solar panel system?

Adding battery storage to work in conjunction with a solar panel system allows you to use more of the renewable electricity generated and reduce reliance on the grid. For example, you could store electricity generated via your solar panels during the day to then use at night.

What is battery storage & how does it work?

Battery storage allows you to keep electricity stored and ready so that you can use it when you need it. You can charge the batteries using excess electricity generated from solar panels or other home generation. Or you can charge them using your mains electricity supply.
