First, you need a router with a fluid module in it, as well as needing to have a bucket within those routers to connect them to pipes. If you are doing both pulling and extracting on the same time, you need to first have the module in hand and set one to transfer into the router and the other to transfer out of the router.

Tried using modular router with an activator module, but for some reason, it doesn't work? Have tried with many different items in the buffer slot to use, but for whatever reason none have worked- have watched multiple guides on how to use them, followed their instructions and setting for the module, but it has not performed a single right click with the item in the buffer slot...

This Router has to output to 8 other routers, which each places one ore. The setup now is one Modular Router with four distributor modules (DM) that get items from chests, and one that distributes these items randomly to one of 8 other modular routers. Those modular routers are the secret. Two stacks of energy upgrades and 15 energy distributor modules to send energy wirelessly to the drills and stasis chamber. Drills are fully upgraded (T2 Eff, T2 Proc, T2 Speed) and Laser Base has 3xT2 Proc and T2 Eff. On top are Nitro Thermo Generators from Powah on top of Blocks of Nitro Crystal.

It's easy to pipe energy into a router via pretty much any mod which handles energy. Will consider a direction toggle for the distributor. Guess it makes sense, given the item distributor can do it. ... With an energy distributor set to pull mode it would pull the power from all 8 generators and could then output that power into a flux plug ...
