

How do you plan a DIY solar project?

The most important part of a DIY solar project is in the planning and design. For these steps you must do a lot of research. A critical number needed for all calculations is the number of watt hours of electricity consumed in a day by all of the appliances you'd like to be supplied by your solar array.

Can you build your own solar array?

Build-your-own from scratch solar array requires advanced technical knowledge and expertise that you may not have. DIY solar home kits are usually designed to work off-grid for small projects. Today, solar kits that allow you to directly tie into the public utility grid are becoming available, and may allow you to power your entire home.

How do solar energy systems work?

You have three choices for solar energy systems to power your homes and property: Grid-tied -- Your solar array is directly connected to the public electric utility which you pull from when energy demand is higher than your system output. Any excess is sent to the grid. In most places, the electric company credits your bill.

Is DIY solar the cheapest form of electricity?

For starters, the International Energy Agency recently stated in its 2020 Outlook report that solar energy -- the "new king" of electricity -- is the cheapest form of electricity ever created. So, significantly reducing or even eliminating your utility bills with DIY Solar is a near certainty now.

Do you need a permit for a DIY solar project?

There are multiple permits and inspections -- from your local jurisdiction and power company -- that you must pay for before your DIY solar project can go live. Consult with them to know what you must do and when in the process. Missing even one could delay or even prevent your project's completion.

Do you need a company to install solar?

Most homeowners that want to install solar end up finding an installation company, but that isn't the only option. Do-It-Yourselfers with a strong background or experience in electrical contracting would be able to complete a successful DIY solar project from start to finish after careful research and planning using the guidelines here.

This is the first test of a full solar system game/ simulator I want to make. I released this to let people play it while I take feedback and figure out where to take the game. (that's why there's no art) Thanks for Playing :) ps: the game does have a bug where the planet will launch and then slingshot the opposite direction.

It isn't just the star that pulls on the planets: the planets pull on each other, and the star too. This game simulates a solar system by adding up all the pulling for a single moment in time. It then calculates the resulting tug on each object, moves them, and repeats. By doing that many times a second you can see how your solar system evolves.
