Are sodium ion accumulators available?

Sodium-ion accumulators are operational for fixed electrical grid storage, but vehicles using sodium-ion battery packs are not yet commercially available. However, CATL, the world's biggest lithium-ion battery manufacturer, announced in 2022 the start of mass production of SIBs.

How many sodium ion batteries does Hina have?

HiNa also revealed three sodium-ion products, the NaCR32140-ME12 cylindrical cell, the NaCP50160118-ME80 square cell and the NaCP73174207-ME240 square cell, with gravimetric energy densities of 140 Wh/kg, 145 Wh/kg and 155 Wh/kg respectively. In 2019, it was reported that HiNa installed a 100 kWh sodium-ion battery power bank in East China.

What are the advantages of sodium ion batteries?

Sodium-ion batteries have several advantages over competing battery technologies. Compared to lithium-ion batteries, sodium-ion batteries have somewhat lower cost, better safety characteristics (for the aqueous versions), and similar power delivery characteristics, but also a lower energy density (especially the aqueous versions).

Grootste uitdaging van de Natrium accu is energiedichtheid (dus veel ruimte en gewicht per kWh), en een geringe laad/ontlaadstroom (dus je EV zal er niet best op accelereren, en je zomerpiek van ...

Forskning och utveckling kring batterier går snabbt framåt. Ett syfte är att ersätta de dyra och även omstridda metallerna som dagens batterier ofta innehåller. Svenska batteriutvecklaren Northvolt meddelar nu att de har tagit fram ett natriumjonbatteri där litium ersätts med ett salt kallat "preussiskt vitt". Utöver det är batteriet fritt från metallerna nickel, ...

Chinese accugiganten zoals BYD en CATL installeren zelfs al natrium-ion-accu's in hun kleinere EV-modellen. De BYD Seagull, die rond de EUR 11.000 kost, wordt aangedreven door natrium-ionbatterijen.

Stationaire toepassingen, zoals energieopslag op netwerkschaal, zijn een ander veelbelovend gebied voor natrium-ionbatterijen.

The technology is generally seen as the battery chemistry most well-placed to commercialise at scale and ease supply chain bottlenecks around lithium-ion, the dominant battery chemistry for both electric vehicles (EVs) and BESS applications. Part of this is a similar design making it easier to "drop in" to lithium-ion production lines.
