

Photos of finished rooftop photovoltaic panels installed

Can solar panels be installed on a flat roof?

You can install solar panels on a flat roof, but it's not usually a good idea for domestic properties.

How do you install solar panels on a roof?

The first step in the physical installation process is securing the roof attachments supporting the solar panels. First, the installer will find the rafters beneath your roof shingles. They'll either use a stud finder or measure from the roof's edge to find the rafters, typically spaced 16-24 inches apart.

How much does a flat roof solar system weigh?

A fully-installed system with 12 solar panels usually weighs 240kg, which the average roof can easily support - but with ballasts, this figure increases to 1,200kg. This is why most flat-roof solar arrays are installed on large commercial buildings with strong roofs.

What is on-roof solar roofing?

On-roof solar panels make up the most widely recognisable solar roofing system in the UK. The system is made up of individual panels mounted onto the roof which sit on top of your existing tiles or other roof finish. This solar roofing system is proven and widely available, but the main downside is the aesthetics.

Can you install ground-mounted solar panels on a pitched roof?

You can install ground-mounted solar panels, though you'll again need more space than you would if you installed panels on a pitched roof. This is because you'll need to space out your panels so they don't cast shade on each other, just like on a flat roof.

Are on-roof solar panels better than solar panels?

In many cases they are also less efficient than solar panels at present, making them less beneficial from the perspective of reducing carbon emissions. On-roof solar panels make up the most widely recognisable solar roofing system in the UK.

team contractor, male engineer and female technicians wearing safety uniform, talking about installing plan, check the working system and maintenance solar panel of solar power plant to ...
