What is a control strategy for a three-phase PV inverter?

Control strategy A control strategy is proposed for a three-phase PV inverter capable of injecting partially unbalanced currents into the electrical grid. This strategy aims to mitigate preexisting current imbalances in this grid while forwarding the active power from photovoltaic panels.

What is the control performance of PV inverters?

The control performance of PV inverters determines the system's stability and reliability. Conventional control is the foundation for intelligent optimization of grid-connected PV systems. Therefore, a brief overview of these typical controls should be given to lay the theoretical foundation of further contents.

How do PV inverters control stability?

The control performance and stability of inverters severely affect the PV system, and lots of works have explored how to analyze and improve PV inverters' control stability. In general, PV inverters' control can be typically divided into constant power control, constant voltage and frequency control, droop control, etc. .

Why does a PV inverter have a series parallel resonance?

When the PV inverter is connected to the grid, series-parallel resonance may occur due to the dynamic interaction between multiple inverters operating in parallel and between the PV inverter and the grid impedance. Consequently, this leads to changes in the output voltage harmonic characteristics of the PV plant.

How do PV inverters control a low-voltage network?

Thus, a control method for PV inverters is presented, so that they inject unbalanced currents into the electrical grid with the aim of partially compensating any current imbalances in the low-voltage network where inverters are connected, but in a decentralized way.

How does a PV inverter affect harmonic amplification in PCC voltage?

With increasing the PV output power, the maximum harmonic amplification coefficient in the low frequency band also grows to 1.228. Meanwhile, with the output power grows, the PV inverter causes harmonic amplification in PCC voltage.
