

What is a residential solar inverter?

Residential solar inverters are responsible for changing the direct current solar panels produce (solar energy) into usable energy. In UK homes, electrical devices run on alternating current, so for effective solar energy production, solar inverters are required to change solar panels' DC energy to AC so that it can be used in the home.

Is a solar inverter a converter?

A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. DC energy is not safe to use in homes.

What does a solar panel inverter do?

A solar panel inverter converts the direct current (DC) electricity generated by your solar panels into alternating current (AC), which is the type of electricity used by most properties. Without an inverter, you wouldn't actually be able to access your solar-generated electricity via your property's wall outlets.

Do all solar inverters work with all solar panels?

Looking out for solar inverters that are more compatible with solar panels not made by the same manufacturer is good practice, because the chances are you'll purchase a compatible inverter. One of the best solar inverter manufacturers for this is LuxPower. To be clear, we aren't saying that all LuxPower inverters will work with all solar panels.

Do you need a solar inverter?

The best solar inverters on the market are capable of inverting a high % of the direct current (DC) they produce into alternating current (AC) that can be used in our homes. Without a solar inverter your solar panels would produce unusable energy, so having one is of vital importance to solar energy systems.

How many volts is a solar inverter?

The inverter is typically equal to either 120 volts or 240 volts depending on the country. Without a solar inverter in your system, you would be unable to power your home safely using the energy you generate via your solar panels. Solar inverters convert solar panel DC electricity to AC electricity for use or feed back to the grid.
