Elon 100. The Elon 100 is connected to the geyser element and thermostat. When the solar modules are producing electricity, the Elon 100 feeds this into the geyser element to heat water, until the water reaches the temperature setting on the thermostat. Depending on the Elon 100 efficiency setting (see Section 3.3) or when

the user presses the ...

8. Recommended wiring size is at least 2.5 mm<sup>2</sup>. Use panel wire for all connections to the Elon<sup>®</sup> 100. 9. Install the Elon<sup>®</sup> 100 unit according to wiring diagram (see Section 2). a. Mount the Elon<sup>®</sup> 100 unit close to the geyser and protect from outside elements. The maximum wire length between Elon<sup>®</sup> 100 and geyser is 3 m. . .

**STEPS TO DISCONNECT THE ELON<sup>®</sup> 100 FROM THE GEYSER.** Switch off the geyser circuit breaker in the main DB board.; Switch off both the AC isolator and DC circuit breaker or isolator.; Remove the geyser cover. Pull out the green element adapter and thermostat from the element by pulling on the element adapter (see the photo). No need to disconnect any of the wires.
