

How many MW of hydroelectric power does Belize have?

Current hydroelectric capacity is produced by 25.5 MW at the Mollejon Hydro Plant, 7.0 MW at the Chalillo Hydroelectric Dam Plant, 19 MW at the Vaca Hydroelectric Facilities, and 3.5 MW at the HydroMaya Dam. The University of Belize has a solar photovoltaic (PV) system that supplies 0.1% of the country's electricity supply.

Where does the energy in Belize come from?

Almost half the energy in Belize comes from hydroelectric power and biomass. BEL purchases 71.5% of its electricity from five domestic independent power producers (IPPs) which produce much of the remaining energy--about 55.6%--of all the electrical needs of the country, and about 40% from a Mexican government-owned electric utility.

How much does electricity cost in Belize?

Belize's utility rates are approximately \$0.22 per kilowatt-hour (kWh), lower than the Caribbean regional average of \$0.33/kWh because of existing renewable energy projects, but still high compared with U.S. mainland rates.

Does Belize have a electricity monopoly?

Created by the Electricity Act of 2000, BEL functions as a legal monopoly--it was granted a 15-year license to generate, transmit, distribute, and supply electricity in Belize with an automatic 10-year recurring license beginning in 2015. Private entities are allowed to generate up to 75 kilowatts of power, after which licensing requirements apply.

PowerPlan allows organizations to estimate and track costs at the level needed to drive valued decision making while incorporating complex overhead loading and allocations. Automated reforecasting tools accelerate budget management and informed spending allocation decisions. Regulated organizations benefit from out-of-the box modeling of ...
