

What is a small wind turbine / wind generator?

Small wind turbine /wind generator designed for battery charging off the grid. Note: We strive to fulfill pre-orders as promptly as possible,though delivery times may vary. When using a mini wind turbine generator kit,it will provide power for off the grid situations.

What is a small scale wind generator?

A small scale wind generator is a device that converts wind energy into electrical energy on a small scale. They are the perfect complement to off-grid solar PV systems. Wind generators require wide open,exposed areas for smooth,laminar flow of air,so urban or forested sites are not suitable.

What is a mini wind turbine generator kit?

When using a mini wind turbine generator kit,it will provide power for off the grid situations. Ideal for charging 12v/24v/48v lead acid style batteries when the sun is not sufficient. We provide a range of wind turbines (small wind generators) that can be used on board vessels or in locations that are far removed from mains power infrastructure.

What is a switch permanent magnet generator?

As a pioneer, we challenged the wind industry first by making PMGs the preferred technology for offshore wind turbines and then making them commercially available to onshore turbines. The Switch permanent magnet generators increase annual energy production, minimize total life cycle costs, and fulfill the strictest grid code requirements.

Can a small wind turbine be used as an energy generator?

With our technology,we provide small wind turbines that can be used extremely efficiently and reliably as energy generatorsfor self-supply. The EasyWind 6 has been on the market for more than 20 years and has up until now been installed in more than 300 different locations.

What is a mini wind turbine battery charger?

We provide a range of wind turbines (small wind generators) that can be used on board vessels or in locations that are far removed from mains power infrastructure. These mini wind turbine battery charger systems, can also be used to provide power for signage and telecommunications.
