

Do solar lights need brackets?

Brackets are almost always required for solar lighting installations. This is because the solar is almost always mounted to the top of the pole and the fixture needs to be mounted lower on the pole. The fixture bracket allows the fixture to mount directly to the same pole and out away from the pole at times.

What is a solar street light fixture?

A solar street light fixture is a particular fixture that operates off DC power. Most manufacturers have their line of fixtures and do not work with fixtures outside their main line. This is because extensive testing has been completed, and warranties exist for all components.

What makes up a commercial solar street light?

The components that make up a commercial solar street light are similar to other commercial solar lights. Each light consists of a solar power array, battery backup, DC light fixture, controller, fixture bracket, and a pole.

What size poles do I need for a solar light system?

The poles provided for standard light applications are quite different from what is provided for a solar lighting system. Solar poles are typically very large, with a 4-6" tip and an 8-14" base, and should always be round. Square poles do not allow for mounting the solar and fixture in any direction and tie you to four direction orientations.

Can a light pole mount multiple lights?

Many of our light poles and brackets also accommodate single or multiple luminaire mounting, giving you greater flexibility in your outdoor lighting design. Choose from sleek and stylish poles for decorative post top lighting fixtures to street lighting poles that have what it takes to provide illumination for roadways over many years.

How tall can a light pole be?

Choose from tapered and non-tapered pole designs and heights of up to 60 feet (18 meters). Many of our light poles and brackets also accommodate single or multiple luminaire mounting, giving you greater flexibility in your outdoor lighting design.
