1. Connecting a grid-tie inverter to a grid-fed wall socket is generally not by code. To say that people do it anyways, wouldn't be far from the truth. As for feeding excess production to the grid - you would have to check with your local rules and regulations.

15kW transformerless grid tie inverter for three phase on grid solar power system, which converts 200-820V wide DC input voltage to 208V/ 240V/ 380V AC output voltage feed the power into the grid. Grid tied pv inverter with LCD display, can set main general parameters. The current THD at rated power and in the sine wave < 3.5%.

most microinverters are so called grid-tie inverters. they follow the grid and are able to inject current into the existing sine wave. They do not generate anything if there is no signal to follow and to push into. So just hooking the outputs together will not achieve any kind of ...
