

What is sky images & photovoltaic power generation dataset?

To fill these gaps, we introduce SKIPP'D--a SKy Images and Photovoltaic Power Generation Dataset. The dataset contains three years (2017-2019) of quality-controlled down-sampled sky images and PV power generation data that is ready-to-use for short-term solar forecasting using deep learning.

Why is solar PV power generation nowcasting important?

Thus, sophisticated solar PV power generation nowcasting technique not only can improve the stability of power generation, but also facilitates the developments of more commercially viable PV systems, the current electricity market and price transactions, and increases the competitiveness of the solar PV energy source [15,16].

Where are the PV power generation data from?

The PV power generation data are from PV panel approximately 125 m away from the camera on the roof of the Jen-Hsun Huang Engineering Center at Stanford University, which are logged by Stanford Utility and shared to us.

How can a sky camera improve the performance of a PV plant?

In addition to the solar resource predicted with the sky camera system, the operational state of the plant will be considered as an input parameter, which will contribute to improving the performance of the prediction models. These models will be a fundamental support tool in the operation tasks of PV plants and electrical distribution networks.

Can sky cameras predict global solar irradiance?

Digital levels of image sequences taken with sky cameras have been used to forecast global solar irradiance with a methodology previously developed and widely reported in the literature.

What is a PV power generation forecast task?

**PV power generation forecast** The PV power generation forecast task can be mathematically described as learning a mapping ( $f$ ) from historical sky image and PV power generation sequences to the future PV power generation.

Solar Panels have helped in industrial and home power generation. But the traditional stationary design drawbacks have finally caught up, leading to ~40% wastage of energy. The stationary ...
