

Should landlords lease land for solar farms?

With the reduced cost of solar panels and high performance of rental incomes, solar farms offer some great benefits for landlords. This article looks at the various benefits for landlords considering leasing land for solar farms and gives an overview of the current solar energy market.

What is solar land leasing?

Solar land leasing involves granting the rights to develop and operate solar power installations on your land to a solar energy company or developer. Instead of purchasing the land outright, these companies lease the land from you, typically for a long-term period. How does solar land leasing work?

How does a solar lease work?

The solar company conducts feasibility studies to assess the land's potential for solar power generation. If the land meets the requirements, the company will negotiate a lease agreement with the landowner, specifying the lease duration, rental rates, and other terms and conditions. What are the benefits of leasing your land for solar?

Can I lease my land for solar power generation?

Landowners interested in leasing their land for solar power generation will need to find out if they have a grid connection located on their land or in the vicinity with surplus power in the local area.

What should a solar lease include?

The lease is also likely to contain covenants (which will bind the solar panel land and any adjoining land in the ownership of the landlord) not to do anything which could damage any electric cables or wires and not to deal with the land in any way that could be detrimental to the solar project.

Do landowners get paid for a solar project?

The landowner typically receives annual lease payments or in some cases, may even sell a portion of their land for the solar project. The lease payments become a source of passive income for the landowner and help increase the use of clean energy.
