

What is the photovoltaic effect?

The photovoltaic effect is a process that generates voltage or electric current in a photovoltaic cell when it is exposed to sunlight. It is this effect that makes solar panels useful, as it is how the cells within the panel convert sunlight to electrical energy. The photovoltaic effect was first discovered in 1839 by Edmond Becquerel.

How does light affect solar cells?

Solar cells experience daily variations in light intensity, with the incident power from the sun varying between 0 and 1 kW/m². At low light levels, the effect of the shunt resistance becomes increasingly important.

Does light intensity affect the performance of solar energy generation?

In the experimental study of the influence of light intensity on the performance of solar energy generation of trough photovoltaic cells, the trough concentrated photovoltaic power generation system with high cost performance is used, as shown in Figure 2. Trough type concentrating photovoltaic power generation system.

Why are solar panels useful?

It is this effect that makes solar panels useful, as it is how the cells within the panel convert sunlight to electrical energy. The photovoltaic effect was first discovered in 1839 by Edmond Becquerel. When doing experiments involving wet cells, he noted that the voltage of the cell increased when its silver plates were exposed to the sunlight.

How do photovoltaic panels work?

This effect is mainly activated by sunlight, although it can be triggered by natural or artificial light sources. However, in practice, the vast majority of photovoltaic panels use exclusively sunlight as an energy source.

Why do photovoltaic panels use only sunlight?

However, in practice, the vast majority of photovoltaic panels use exclusively sunlight as an energy source. The French physicist Alexandre-Edmond Becquerel was the one who discovered this phenomenon in 1839 while investigating the interaction between light and electricity, thus marking the beginning of the development of photovoltaic technology.
