

What is decommissioning a solar project?

Decommissioning refers to removal of equipment and restoration of the site. Unlike some other forms of development, a decommissioned solar project site can be repurposed for other uses, such as agricultural production. Often solar project permits define how a solar project is to be decommissioned.

How do you plan for solar decommissioning?

PLANNING FOR DECOMMISSIONING Decommissioning requirements can be set by states and counties. Landowners and developer agreements may set additional requirements. It is prudent for local governments to plan ahead for solar decommissioning and create ordinances that spell out expectations and obligations.

Does green clean solar prioritize sustainable waste practices for decommissioning?

Green Clean Solar has prioritized sustainable waste practices for decommissioning efforts. We prioritize a turnkey process for decommissioning plans and implement a streamlined waste removal and recycling process. Want a no-hassle, cost-effective partner for your next decommissioning project?

Can a solar project be decommissioned?

Often solar project permits define how a solar project is to be decommissioned. For an industry-suggested policy framework for decommissioning, including plan submittal, requirements, and financial security, please visit [Renewable Energy Facility Decommissioning: Industry Recommendations](#). 1 IEA and IRENA. 2016.

What happens at the end of a solar farm?

At the end of a solar farm's life or a Power Purchase Agreement (PPA), owners have a few options for moving forward. They can repower the plant, in full or partially, or they can decommission the project and break down equipment, returning land back through revitalization efforts.

How to deal with solar PV waste material?

Therefore, the methods of dealing with solar PV waste material, principally by recycling, need to be established by 2040. By recycling solar PV panels EOL and reusing them to make new solar panels, the actual number of waste (i.e., not recycled panels) could be considerably reduced.
