What happens if a solar panel system is not installed properly?

If your solar panel system is not properly installed, it may cause problems in the future. For example, the system may not be operating correctly, meaning it won't produce as much energy as it should.

Are there common solar panel problems?

Now, there are some common solar panel problems that are actually myths and not actual issues. Take the case of solar panel glare problems. While solar panels do reflect some amount of light, the glare is unlikely to bother your neighbors - or anyone for that matter. The reason is simple.

Should I call a professional if my solar panels are not working?

Call the experts: If you're unable to pinpoint the problem on your own, it's time to reach out to a solar panel professional. Even if you find a problem on your own, it's still wise to reach out, as attempting to fix the problem yourself could void your warranty or make things worse. How do I know if my solar panels are not working?

How to prevent solar panel heat problems?

Keeping the panels free from dust and dirt also helps in preventing solar panel heat problems. Most solar panels are fixed by using a photovoltaic mounting system. Unless this process of panel racking is done properly, the panels will not remain fixed in place. In time, even strong winds can move them out of position.

Why do solar panels fail?

Blown bypass diodes - Permanent failure often due to severe localized shading or overheating. Earth leakage is a common problem with older solar panels that is often caused by backsheet failure leading to water ingress or PID or potential induced degradation. Strings of solar panels operate at high voltages, up to 600V or higher.

Are my solar panels working?

If you're still not sure if your solar panels are working, the best thing to do is call a professional. They will be able to inspect your system and tell you what's wrong with it. If you have any of the tips from this article, try using them before calling for help.
