The electricity sector of Uruguay has traditionally been based on domestic hydropower along with thermal power plants, and reliant on imports from Argentina and Brazil at times of peak demand. Over the last 10 years, investments in renewable energy sources such as wind power and solar power allowed the country to cover in early 2016 94.5% of its electricity needs with renewable ...

Energy Sector Background Uruguay does not possess great energy resources. Local energy is limited to hydropower and biomass and other RE; however, the former has been practically developed in its entirety and the latter entails relatively high costs. Therefore, the country is dependent on imports for a large part of its supply of modern primary ...
