

What is the appropriate cost of operating a microgrid

Does a microgrid control system cost more?

The control system for the smaller microgrid will likely cost less in real dollars but consume more of the overall project budget than the control system for the larger one. "Your control system may be a little less [costly] in smaller ones, but it's going to be a much larger portion of the cost than in the larger one.

What is a microgrid?

loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid. A microgrid can connect and disconnect from the grid to enable it to operate in both grid-connected or island mode."

Why should you invest in a microgrid?

Enterprises are more motivated than ever to control energy costs and increase sustainability, while the utility grids they rely on grow more vulnerable due to aging infrastructure, extreme weather, and rising energy demand. A microgrid can help your organization achieve its goals and control its energy future- with or without capital investment.

Can a microgrid reduce energy costs?

This can result in lower energy costs; for example, Pittsburgh International Airport's switch to a solar and natural gas microgrid led to a reported USD 1 million in savings in its first year. ² And a California winery built a microgrid around photovoltaic (PV) solar energy that reduced its monthly energy bills from USD 15,000 to USD 1,000. ³

Who owns a microgrid?

According to Navigant Research, the majority of grid-tied microgrids today are owned and financed by facility owners, especially in the campus/institutional category. It is important to recognize that microgrids, especially community microgrids, can utilize the existing distribution system infrastructure, radically reducing their costs.

Why are microgrids so expensive?

Historically, microgrids have been more expensive than traditional power grids due to their use of utility-scale technology that is downsized, according to Bruce Nordman, a research scientist at the Lawrence Berkeley National Laboratory.
