What is a solar panel meter?

Solar panel metres, also known as net metering devices, play a vital role in monitoring energy production from solar panels. They help homeowners and businesses keep track of their electricity generation from the sun and make informed decisions to maximise their savings.

Do I need a solar meter?

Solar-panel owners should have a PV-generation meter that shows how much electricity their system is generating. If you're getting a smart meter installed, make sure that your supplier is aware you have solar panels. Check whether your smart meter and in-home display will work fully with them.

Can I have a smart meter if I have solar panels?

What information about my solar system will be displayed on my smart meter? Your electricity smart meter will record your export reading and you will be able to view this on your meter display.

Why do I need a solar panel meter?

Being able to read your solar panel meter is vital for monitoring the performance of your solar electric system. It allows you to track the amount of power generated by your solar panels, the amount of excess power that is sent back to the grid, and your electricity consumption.

How do I read my solar panel meter?

To read your solar panel meter, follow these steps: Check the LCD display screen to see the current power generation and consumption in kW. Note the total kWh produced by your solar system and consumed from the utility grid. This information may be shown on separate screens or rotate on the display screen.

How does a solar meter work?

The meter typically displays your solar production in kilowatt-hours (kWh) and the excess power that your system sends back to the utility grid. To calculate your solar system's performance, you can compare your solar panel meter reading to your electricity consumption.
